

Improve Visibility & Aesthetics

Protective qualities are the priority, but we believe that bike and pedestrian safety infrastructure can be both protective *and* visually appealing.

RAILRIBBON™ is a vertical element designed to enhance both the visibility and aesthetics of the **BIKERAIL®** and **CURBRAIL™** Systems. It can also be anchored directly to asphalt or concrete to create decorative, delineated spaces. **RAILRIBBON** aids in traffic calming by ensuring that motorists clearly see the protective Rail systems and dedicated safe zones. As an alternative to Flex Delineators, it significantly improves the overall appearance of physical infrastructure in public spaces.

Durable Material, Easy Installation

Made of resilient polymer, **RAILRIBBON** withstands extreme temperatures and long-term wear and tear. Anchor directly to surface or add to new or existing **BIKERAIL** or **CURBRAIL** systems in minutes. Use in conjunction with Flex Delineators for maximum Rail system visibility, or without Delineators for a more decorative appearance.

Shapes + Sizes = Design Choice

Create attractive corridors and intersections with a choice of white **RAILRIBBON** shapes and sizes. Choose from Arc, Half Arc, Sphere and Bulb shapes - each available in various heights and in single or double configurations. Combine **RAILRIBBON** elements quickly and easily to construct decorative, custom separation treatments.

RAILRIBBON™ at a Glance

- Optional vertical accessory
- Add to **BIKERAIL®** and **CURBRAIL™** systems or attach directly to asphalt/concrete surfaces
- Enhances visibility and aesthetics
- Durable polymer material
- Quick, easy assembly
- Add to new or existing installations
- Use with or without Flex Delineators
- Multiple shapes and sizes: Arcs, Spheres, Bulbs
- Create custom, decorative systems
- Color: white
