

Highly Visible? ✓

Protective? ✓

Visually Appealing? ✓

Yes, it's the trifecta of bike/pedestrian safety infrastructure.

New **RAILSCREEN[™]** Panels attach to **DEZIGNLINE[®] BIKERAIL[®]** and **CURBRAIL[™]** modular steel Rail systems -- or directly to asphalt or concrete -- to create separation that motorists clearly see and effectively respect.

The visually-appealing modular steel Panels install quickly and easily, either during initial assembly or as an add-on accessory any time thereafter. Standing 36" above grade, **RAILSCREEN** easily combines with **RAILRIBBON[™]** and Flex Delineator vertical elements.

Customize It!

Bike lanes and pedestrian spaces aren't work zones ... so they shouldn't *look* like work zones. Using colors, decals and laser-cut imagery, **RAILSCREEN** offers the opportunity to create uniquely beautiful separation systems that meet a community's safety, functionality and design standards.

Make a statement by integrating our standard "Biker" and "Cosmic" Panels into the Rail system, or customize panels with local imagery to:

- Align with community identity and placemaking objectives
- Provide wayfinding info or maps
- Feature business/sponsorship logos

Defining Protected Space

Use **RAILSCREEN** to create effective vertical separation for permanent or temporary purposes:

- Physically separated bike lanes
- Curb bump-outs
- Parklets
- Mobility Hubs
- Construction Detours
- etc.....

RAILSCREEN[™] at a Glance

- Modular Steel Panels
- Add to **BIKERAIL[®]** and **CURBRAIL[™]** systems or attach directly to asphalt/concrete surfaces
- Enhance visibility and aesthetics of protected spaces
- Quick, easy assembly
- Customize with color, decals, laser-cut imagery/logos
- Combine with Flex Delineators and **RAILRIBBON[™]**
- Multiple applications for defining protected space
